

JS Keyword

- Keyword in Js are pre-defined words that have specific meanings to the interpreter and that meanings cannot be changed.
- Reserved Keywords(case, char, let#, var, import#, export#)
- Reserved Keywords object , properties & methods(Date, Array, function, Math, Number)

JS Variables

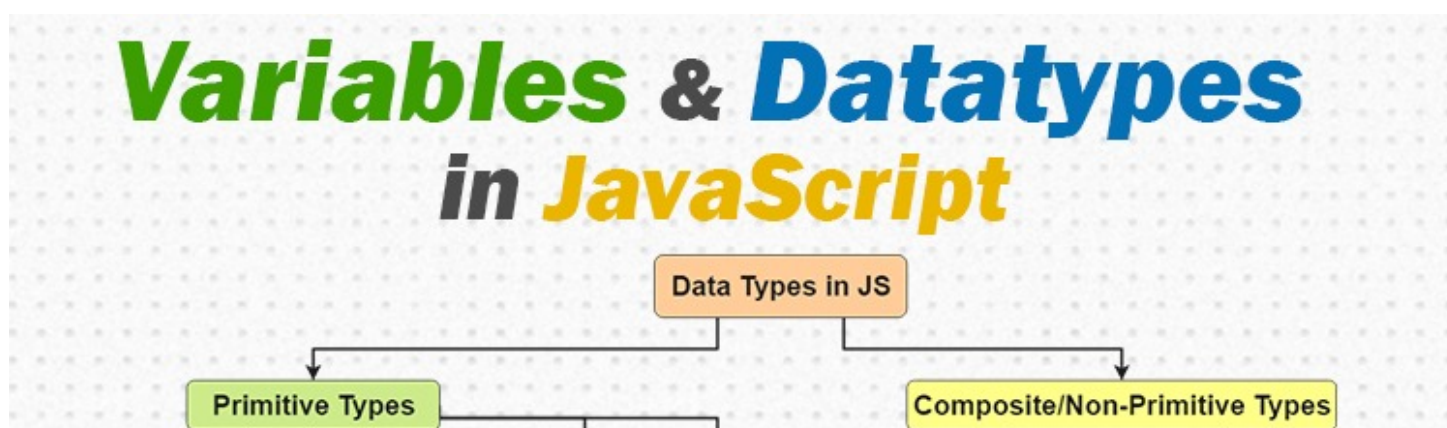

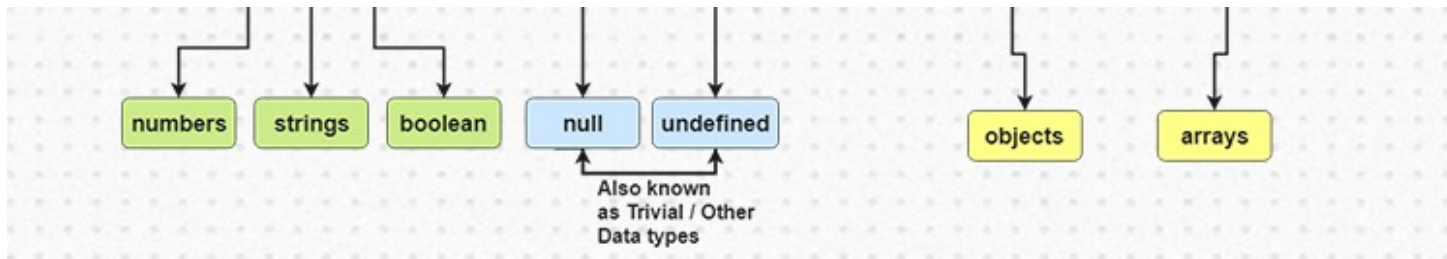

let num = 10;
define variable types
let, var & const
=> var(function scope)
 let(block scope)
 const(block scope)
var is used to define variable globally.

Interview Question.
1 difference between let, var & const.
2 what is hoisting in Js.

Data Type

A data type in JavaScript specifies the specific type of value that a variable can store.

Types of Data Type

Primitive Types:- Primitive data types are the set of all basic building blocks for which data represents. They are manipulated by value.

-Number (10)

```
let marks = 10;
```

-Strings ("this is the string")

```
let definition = "combination of characters and words"
```

-boolean (true/false) (1/0)

```
let isMobile = true
```

Trivial Type

```
let isMoney = null;
```

Undefined

Interview Question.

3) what is Trivial Type?

4) difference between null and undefined.

5) non-primitive data type are also known as?
